

TIMKEN -TYPE- TDI

DOUBLE-ROW • TYPE TDI

TYPE TDI

TDI style consists of a single-piece (double) inner ring plus two single outer rings.

It is normally supplied complete with an outer-ring spacer as a pre-set assembly.

To suit the application duty, the builtin setting value needs to be established by your Timken engineer before an order is placed.

A groove and holes can be supplied in the outerring spacer to allow lubricant to pass from the bearing housing. Contact your Timken engineer for spacer configuration information.

Consult your Timken engineer before making a final bearing selection to help ensure suitability, availability and the most cost-effective solution.
